HOMES

for

VARIOUS FAMILY BUDGETS

We have great pleasure in being able to present in this book for the convenience and guidance of prospective home builders in our community an excellent and most timely selection of small homes of diversified architecture and flexibility suitable to the pocketbook and needs of the many.

FEATURES

1. This includes designs planned for the very minimum F.H.A. room size requirements as well as a range of one story homes up to the three bedroom class. Also included are some very small one bedroom plans which will not be F.H.A. approved but which are in demand by those not getting F.H.A. approved loan and by G.I.'s. Many of these plans are illustrated with and without basement.
2. "Homes That Can Grow." This group includes homes which are definitely planned for future expansion. Various ideas are illustrated such as:
 - 2 room plan, add 1 bedroom
 - 2 room plan, add 1 bedroom and porch
 - 3 room plan, add 1 bedroom, breezeway and garage
 - 3 room plan, build future rooms in attic
 - 3 room plan, add new living room and porch, garage, etc.
 G.I.'s are particularly interested in these "Expansible Home" ideas now, as construction costs can be held down for the present and F.H.A. will insure (under Titles 3 and 6).
3. Apartment Garages — Home Income Ideas. This group includes 6 garages, 5 of which accommodate 2 cars, and have apartments and/or rentable rooms over. The 6th is a small 2 room plan with garage attached, which may be used as a guest house. Also included is 1 narrow lot 2 apartment.
4. All homes shown herein were designed and planned by competent architects long experienced in small home architecture. Complete blueprint plans, estimate of costs and other desired information are available at our office.
5. If you contemplate the building of a new home, it would pay you to not only familiarize yourself with the plans illustrated herein but also to study our other house plans and complete home building service. It is all for your use and without any obligation whatsoever. Come in and see us any time at your convenience.

The Allis •

The "Allis" gives a choice of five distinct designs. These homes will appeal particularly to those with small families who appreciate individual characteristics. The floor plans include four large rooms which are really equal to five rooms in comfort, equipment and efficiency thereby assuring a permanent basis for true economy. These homes are suitable and appropriate to any location or neighborhood.

BUILD THE EXTRA BED ROOM NOW OR IN THE FUTURE

The seven original and attractive homes with the basic floor plan illustrate the essential requirements of the newly-weds of today; efficiency of layout, compactness for economy, ample room comfort and good design. The extra cost for the added bedroom can be saved for the future. Design "D" offers the convenience of an attached garage and breezeway. The discriminating builder will appreciate the possibilities offered by these small modern homes.

DESIGN F

The Aider •

OPPORTUNITY FOR A BED ROOM ADDITION

The plan of this attractive Colonial home is most interesting as the central hall enables one to enter directly to any room and the bath without passing through other rooms. It also provides an additional bedroom when required at some future date. The larger front porch is a feature desired by many. The kitchen and all rooms are fully equipped for comfort and convenience.

ACCURATE PLANS

ARE ESSENTIAL IN BUILDING A HOME

HOME BUILDING is a complicated process in which a mistake means a loss in time, money and satisfaction. To build a satisfactory home — with no after regrets — we strongly recommend the use of carefully made, accurate blue-print working plans. It is essential, safe and economical to first construct the house on paper. Accurate plans and specifications must be submitted to a loaning agency for its approval when you apply for a mortgage loan on a new home.

EXPERIENCED DESIGNERS. Years of experience in house planning and construction and an architectural department composed of skilled draughtsmen, architects, and engineers, are the elements upon which plans of the utmost accuracy and completeness in regard to design, strength, durability, and comfort and home conveniences, are created.

BLUE PRINT PLANS. Our blue print plans include the following complete drawings for each design: Basement or foundation plan, first floor plan, second floor plan, front elevation, right side elevation, left side eleva-

SPECIFICATIONS are statements of particulars which tell what you are going to receive in materials and workmanship. Building contract forms are also available.

tion, rear elevation, sections and detailed drawings, all necessary framing plans. All working plans are drawn to standard scales. Blue prints for each design are available.

REVERSED PLANS. Obviously, a plan designed for a lot facing east will not result in the best exposure when your lot fronts to the west. Plans of homes as illustrated in this book are available either as shown or reversed, as may be required.

SUPPLEMENTARY DETAILS. Further supplementary details for any of our plans will be furnished upon request.
